**I. OPEN DISASTERS/EMERGENCIES:**

**II. WEATHER:**

A combination of low humidity, warm temperatures, and dry fuels will increase fire weather concerns for the southern Sierra and Tehachapi Mountains until 1600 hours today.

## State Weather Map

## III. FIRES:

### Overall Fire Risk:

#### Northern California

Dead fuels continue drier to much drier than is typical for the end of the calendar year, while a great share of the mid to higher terrain is devoid of even a light snowpack. This will continue to produce greater small fire potential than is seasonably normal. Meanwhile, dry wind events combined with minimal wintertime resources can boost the chances of larger fire potential in the driest, lower-elevation Predictive Service Areas (PSA). We are experiencing various stages of long term drought, with Severe to locally Extreme drought conditions covering most of Northern California

#### Southern California

Expect light initial attack (IA) activity to continue across the region through the forecast period due to above normal temperatures and low humidity.
